While the Examiner relies on 37 C.F.R. 1.111, and 37 C.F.R. 1.121, as set forth in the MPEP (August 2001), at page 700-171, right column, third paragraph, last sentence states as follows:

A marked-up version, however, does not have to be supplied for any added paragraph(s) or any deleted paragraph(s), as it is sufficient to merely indicate or identify any paragraph that has been added or deleted.

As the Abstract is part of the specification, (see MPEP (August 2001) Section 601, right column, item J), the previous Amendment did comply with the MPEP. In order to alleviate the concerns of the Examiner, a marked-up copy of the Abstract and a new Abstract have been provided.

CONCLUSION

Should there be any outstanding matters that need to be resolved in the present application, the Examiner is respectfully requested to contact Elliot A. Goldberg (Reg. No. 33,347) at the telephone number of the undersigned below in connection with the present application.

If necessary, the Commissioner is hereby authorized in this, concurrent, and future replies, to charge payment or credit any overpayment to Deposit Account No. 02-2448 for any additional fees required under 37 C.F.R. §§ 1.16 or 1.17; particularly, extension of time fees.

Respectfully submitted,

MARKED-UP COPY OF ABSTRACT

A door glass run [attached to a door sash of a vehicle for sealing between the door sash and a door glass includes a door glass run body having a substantially U-shaped cross section, and a pair of lip portions extending from an opening edge of the door glass run body toward a bottom face portion of the door glass run body and slidably contacting with the door glass. The lip portions have lengths individually set so that, even if the door glass vibrates in the door glass run body, the lip portions may not be spaced away from the door glass] includes a door glass run body having a U-shaped cross section, and a pair of lip portions each lip portion extending from opposite sides of an opening edge of the door glass run body toward a bottom face portion of the door glass run body and effective to slidably contact with the door glass. The lip portions have lengths individually set so that, even if the door glass vibrates in the door glass run, the lip portions will not be spaced away from the door glass. Or a protrusion is provided on an inner wall face of the door glass run body in an opposing relationship to a rear face. A height of the protrusion is set so that, even if the door glass vibrates, an end portion of the lip portion does not contact with an inner wall face of the door glass run body.
